Fund Manager comments

Echiquier Value Europe I turned in a positive monthly performance of 1.28% and of 18.42% year-to-date.

In September, the MSCI Europe NR index increased by 1.59%, while the MSCI Europe Value index rose by 0.60%. European equity markets rose amid euphoria over US technology stocks. The portfolio underperformed against its benchmark index, but outperformed against its style index. The biggest positive contributors were the commodities and industrial goods and services sectors. Healthcare and telecoms contributed negatively. In terms of stock selection, Endeavour Mining continued to benefit from positive trends in the gold price. Meanwhile, Vallourec secured a USD 1 billion contract with Petrobras. Meanwhile, Henkel is being penalised by low household goods and adhesives volumes, and Remy Cointreau is cautious about its US volumes. The portfolio structure remained unchanged, with cash holdings at 3.5% at the end of the period.

Evolution of the performance of the fund and its reference indicator since inception

Risk indicator

Important risk(s) for the fund not taken into account in this risk, guarantees. The risk associated with this fund is not guaranteed and may change over time.

synthetic risk indicator shows the level of risk of this product compared with others. It indicates the probability that this product will incur losses in the event of market movements or if we are unable to pay you. We have classified the product in risk class 5 out of 7, which is a low to medium risk class. In other words, the potential losses associated with the future performance of the product are low to medium and, if the situation were to deteriorate on the financial markets, it is unlikely that our ability to pay you would be affected.

This indicator represents the risk profile shown in the KID. The risk indicator assumes that you hold the share for 5 years. Warning: the real risk may be very different if you opt to exit before that time, and you may get less in return

Glossary

Lexicon of financial conditions

Mechanism by which the net asset value is adjusted upwards (or downwards) when the change in liabilities is positive (or negative) in order to reduce the cost of Swing pricing portfolio rebalancing to the holders of the fund as a result of changes in liabilities

Lexicon of risk indicators

Volatility Measure of the amplitude of variations in the price of a share, a market or a fund. It is calculated over a given period and is used to assess the regularity of the

performance of a share, market or fund.

Indicator of the (marginal) return obtained per unit of risk taken. Sharpe ratio

If the ratio is negative: less profitability than the benchmark

If the ratio is between 0 and 1: outperformance with too much" risk taken. Bêta If the ratio is greater than 1: outperformance that does not come at the cost of "too much" risk."Indicator which corresponds to the fund's sensitivity in relation to

For a beta of less than 1, the fund is likely to fall less than its index; if the beta is greater than 1, the fund is likely to fall more than its index.

Information ratio Synthetic indicator of the effectiveness of the risk/return trade-off. A high indicator means that the fund regularly outperforms its benchmark index.

An indicator that compares the fund's volatility with that of its benchmark index. The higher the tracking error, the further the fund's average performance is Tracking error

from its benchmark index.

Max drawdown measures the biggest fall in the value of a portfolio.

days)

Sensitivity

Commodities

Time to recovery (business Recovery time, which corresponds to the time needed for the portfolio to return to its highest level (before the "max drawdown").

Variation in the value of an asset when another factor varies at the same time. For example, the interest-rate sensitivity of a bond corresponds to the variation in its price caused by a rise or fall in interest rates of one basis point (0.01%).

Lexicon of financial analysis

FV/Sales Enterprise valuation ratio: enterprise value/sales

Company valuation ratio: Price Earning Ratio = market capitalisation/net profit.

Consumer discretionary In contrast to basic consumption, it represents all goods and services considered non-essential. **Basic consumption** As opposed to discretionary consumption, it represents goods and services considered essential.

Communication Services This sector includes telecoms network operators and providers of communications and data transmission services

Emerging countries Emerging countries are countries whose economic situation is in the process of development. This growth is calculated on the basis of GDP, new businesses

and infrastructure, and the standard of living and quality of life of the inhabitants.

A natural resource used in the production of semi-finished or finished products, or as a source of energy

Lexicon of credit analysis

Investment grade bond A bond is said to be "investment grade", i.e. if its financial rating by the rating agencies is higher than BB+.

High vield bond A high-yield bond is one rated below BBB- by the rating agencies.

The average life of its cash flows weighted by their present value. All other things being equal, the higher the duration, the greater the risk.

Yield to worst The worst return a bond can achieve without the issuer defaulting.

Yield (all calls exercised) The yield on a bond includes any call dates incorporated into the bond. These "call" dates correspond to intermediate maturities which give the possibility of

redeeming the bond before its final maturity date
