Monthly Comments

European stock markets closed higher in September, against the backdrop of the US Federal Reserve cutting its key interest rate by 25 basis points. The market shrugged off uncertainties over customs duties, geopolitical tensions and the persistent weakness of the German economy. Two sectors stood out over the period. Basic resources were buoyed by the continued rise in gold prices, while technology remained in the spotlight, notably with NVIDIA's acquisition of a stake in Intel. The fund outperformed its benchmark, with technology, consumer products & services and commodities contributing positively to performance, while telecoms, healthcare and industrial goods & services contributed negatively.

Over the month, we reduced our positions in Commerzbank and Deutsche Boerse, while increasing our positions in Safran, Leonardo, Elia, Wolters Kluwer and ASML.

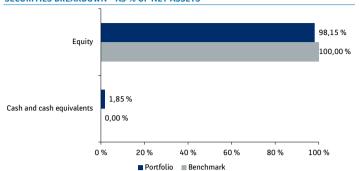

The percentage of sustainable investment presented here is based on the LBP AM Group's proprietary methodology, available in full on our website: https://cdn.lfde.com/upload/partner/sfdr-methodologie-investissement-durable.pdf **LBP AM** www.lbpam.com

TOCQUEVILLE EURO EQUITY ISR GP

MONTHLY ESG REPORT AS OF 30 SEPTEMBER 2025

GREaT PROFILE OF THE PORTFOLIO

ESG approach	Score improvement ¹
Comparison universe restatement rate	25%
Weighted average GREaT score for the portfolio	7.26
Weighted average GREaT score for the restated comparison universe ²	6.97

The GREaT score is based on an ESG analysis methodology proprietary to the LBP AM Group. The GREaT score scale ranges from 1 to 10, with 10 representing the highest ESG quality of an issuer.

¹ The 'score improvement' ESG approach consists in obtaining a weighted average GREaT score for the portfolio that is higher than that of the restated comparison universe.
 ² The restated comparison universe corresponds to the universe from which we have removed a percentage of issuers -

² The restated comparison universe corresponds to the universe from which we have removed a percentage of issuers - corresponding to the restatement rate of the comparison universe - being on an exclusion list applicable to the portfolio and/or having the worst GREaT scores.

ESG: Environmental, Social and Governance criteria

To find out more about the composition of the comparison universe, please consult the fund prospectus.

GREAT METHODOLOGY

Responsible governance

Encourage the dissemination of best practices in terms of corporate governance and business ethics.

Sustainable Resource Management

Sustainable management of human and natural resources: respect for human rights, development of labour laws, sustainable relations with suppliers, environmental protection.

Energy Transition

Mitigating climate risks by supporting the transition from a high-carbon economic model to a more sober and sustainable model

Territorial Development

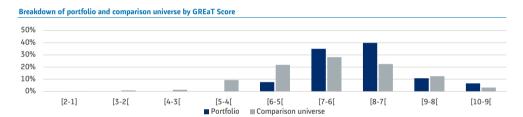

Type of comparable

Comparison universe

Promote responsible practices that meet the Sustainable Development Goals and create value for all stakeholders in the

	Portfolio	Portfolio coverage	Comparable	Comparable coverage
G - Responsible Governance	6.92	100.0%	6.50	100.0%
R - Sustainable Resource Management	6.55	100.0%	6.21	100.0%
E - Energy Transition	7.08	100.0%	6.48	100.0%
T - Territorial Development	6.88	100.0%	6.17	100.0%

As the fund does not make any performance commitments relative to its peer group on the GREaT pillars, the portfolio's rating may be higher or lower than that of its peer group.

Best GREaT Scores of the portfolio and Contribution of each pillar to the issuer's GREaT Score

TOCQUEVILLE EURO EQUITY ISR GP

MONTHLY ESG REPORT AS OF 30 SEPTEMBER 2025

PORTFOLIO SUSTAINABILITY INDICATORS

	Portfolio	Minimum commitment
Percentage of Sustainable Investment	67.5%	40.0%

According to the European SFDR (Sustainable Finance Disclosure Regulation), sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The percentage of sustainable investment presented here is based on the LBP AM Group's proprietary methodology, available in full on our website: https://www.lbpam.com/fr/publications/methodologie-

Indicator 1 - Environment	Portfolio	Comparable
Carbon Footprint (Scope 1+2+3)	402.2	703.5
Coverage rate	98.0%	93.3%

Indicator 2 - Environment	Portfolio	Comparable
Biodiversity footprint - GBS	50.5	71.2
Coverage rate	97.2%	96.8%

Indicator 1 methodology:

Indicator name and source	Definition	Unit of measure
Carbon Footprint (Scope 1 + 2 + 3) Source(s) : MSCI	Measures the CO2 emissions attributable to the fund's investments. This indicator is expressed in tCO2 per million euros invested and covers all emissions, i.e. scope 1, 2 and 3.	tCO2/M€ invested

Indicator 2 methodology:

01/25

02/25 03/25

Indicator name and source	Definition	Unit of measure
Biodiversity impact (BIA-GBSTM) Source(s) : CDC_BIO	GBS: Global Biodiversity Score - estimate of a company's impact on biodiversity, taking into account its historical activity, related to land artificialisation, overexploitation of resources, pollution and climate change. The higher the score, the greater the company's impact on biodiversity.	MSA.ppb*/b€ invested

For more information on the methodologies used to calculate sustainability indicators and on our approach as a responsible investor, please refer to the documents available on our website at https://www.lbpam.com/fr/publications/methodologie-investissements-durables

The French State's SRI label is valid for a limited period and is subject to reassessment. Furthermore, the fact that a UCI has been awarded the label does not mean that it meets your own sustainability objectives, or that the label meets the requirements of future national or European regulations.

PORTFOLIO'S NON-FINANCIAL OBJECTIVE

The financial product's SRI management approach consists of identifying companies with the best sustainable development practices, according to the management company's analysis.

This analysis is based on the GREaT philosophy, specific to the management company, articulated around the following four pillars:

- Responsible governance: this pillar aims to assess the organisation and effectiveness of powers within issuers (balance of power, executive remuneration, business ethics).
- Sustainable management of resources: this pillar looks at the environmental impact and the management of the human capital of issuers (quality of working conditions and management of relations with suppliers).
- Economic and energy transition: this pillar assesses the issuer's strategy in favour of energy transition (greenhouse gas reduction and response to long-term challenges).
- Regional development: this pillar analyses the issuer's strategy in terms of access to basic services.

Several criteria are identified for each pillar and monitored using indicators collected from non-financial rating agencies (MSCI ESG Research, Moody's ESG and EthiFinance Ratings).

The methodology used reduces bias, particularly capital and sector bias.

Ultimately, the management company is the sole judge of an issuer's non-financial quality, which is expressed:

- According to a GREaT score between 1 and 10 - 10 representing the best ESG quality of an issuer.

In addition, the management company applies sectoral and normative exclusions designed to limit investment in issuers with excessive adverse impacts. Our sector exclusion lists include certain issuers from controversial sectors such as tobacco, gambling, coal, oil and gas, according to criteria defined by the management company. Our normative exclusion list is based on analyses of ESG controversies or allegations and identifies cases of severe, systematic and uncorrected violations of ESG rights or infringements. In addition to the management company's common exclusion base, portfolios that hold the French government's SRI label comply with the mandatory exclusions listed in its guidelines.
